

Governance & Risk Management

Clear ownership and control of your cyber risk

We help you build governance that fits how your organisation works: defined roles, proportionate policies and a repeatable way to identify, assess and treat cyber risk. The result is a clear view of risk that supports better decisions at every level.

THE CHALLENGE

Risk without ownership

Cyber risk sits with IT instead of being owned and managed by the business.

Policies that don't fit

Generic documents gather dust instead of guiding everyday behaviour.

Regulatory scrutiny

Regulators and customers expect evidence of effective oversight.

How we deliver

ALIGNED TO

ISO/IEC 27001

ISO/IEC 27005

ISO 31000

FAIR

NIST CSF 2.0 (Govern)

DORA

Our capability

- ✓ Cyber risk assessments and risk registers
- ✓ Quantitative risk analysis using the FAIR model
- ✓ Policy frameworks, ISMS and governance design
- ✓ Third-party and supplier risk assurance programmes
- ✓ Key risk indicators, metrics and board reporting

Benefits & value

Turn cyber risk into a business decision, not just a technical concern.

-  **Accountability:** clear roles and risk ownership
-  **Better decisions:** risk in business and financial terms
-  **Regulatory readiness:** evidence of effective oversight
-  **Proportionate control:** focus on the risks that matter
